

## NON-SELECTIVE HERBICIDES

[illegible]

<sup>1</sup> Neither the publisher nor the author implies endorsement by the listing, nor does omission imply criticism. So-called "brush control" products are considered selective (for broadleaf plants) and are not included here. Always read and follow label instructions for specific application and safety instructions.

<sup>2</sup> Glufosinate-ammonium is listed as a burndown. However, it also has limited systemic activity. So it is quicker-acting than some systemics, with better control of woody and perennial weeds than contacts.

<sup>3</sup> Use only where no future landscaping is planned, such as under concrete.

<sup>4</sup> Restricted-use pesticide. <sup>5</sup> Available as an aerosol only.
